Login PageThe app opens on this page. From here you can login with your credentials (username and password) if you already have them. Otherwise, you can go to the registration page.

Registration Page

From here you can create a new account, which is required to enter the app.
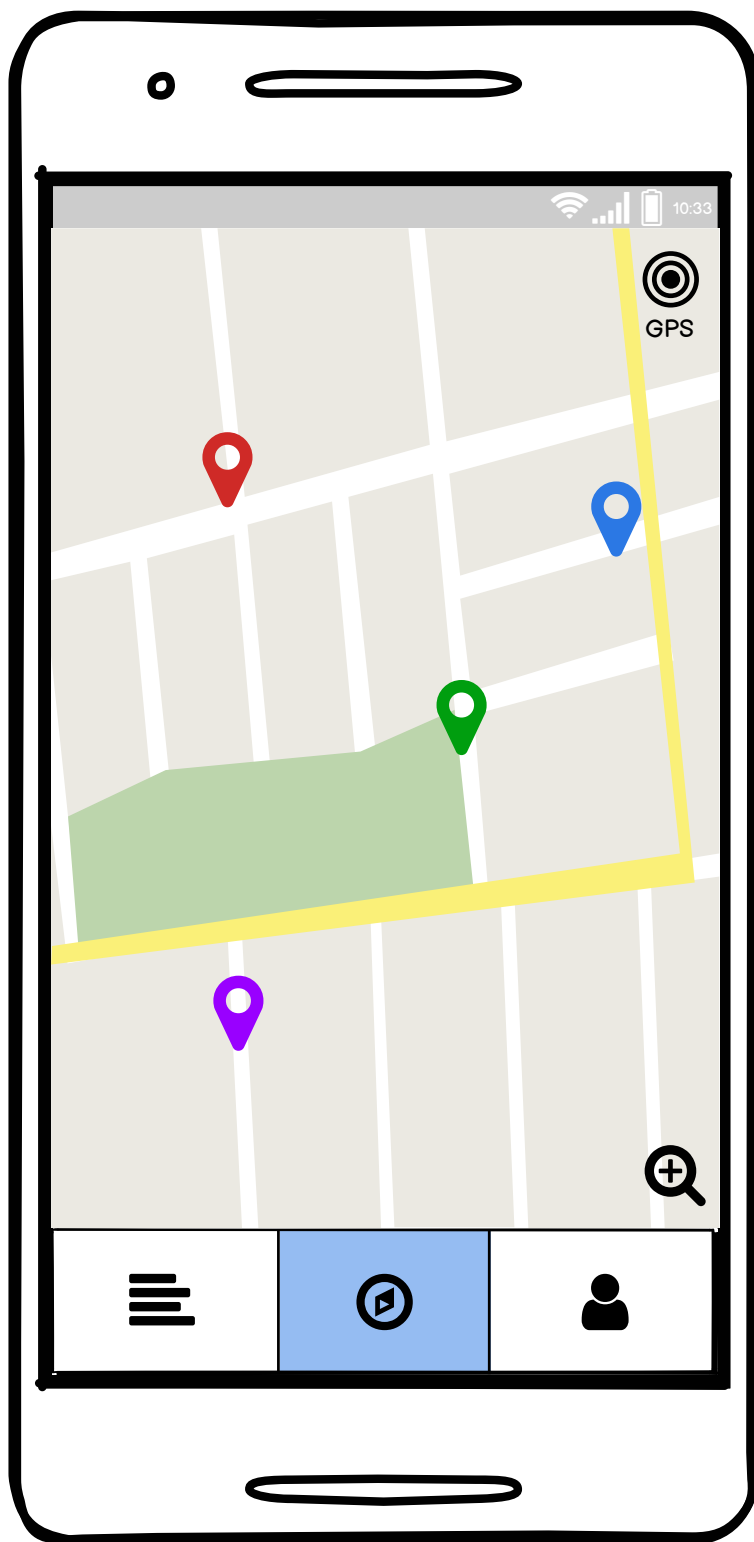

The required fields are email, username, password and a profile picture, chosen from the user's gallery by clicking on the button "Scegli foto". The chosen image will be displayed on screen.

Pressing the Registration button brings the user back to the login phase.

Homepage

This is the Homepage. The first time the app is opened, a tutorial message is displayed to explain how to add a new report. The popup must be closed to continue using the app.

Homepage

This is the Homepage. From here you can go to the other sections of the app using the bottom navigation bar.

The main window shows a map of Rome, and a marker for each report, in the position relative to the report's problem. The marker have different colors, depending on the category of the report. The markers are clickable.

The map can be scrolled and zoomed at will. The user can also quickly access his position by using the GPS button in the top-right corner.

Homepage

If the user wants to know the details about a specific report, he can click the marker.
This opens a popup that displays info about the report, such as a miniature of the report picture, the title and a preview of its description.
The popup is also clickable, and opens up the profile of the user who made that report.
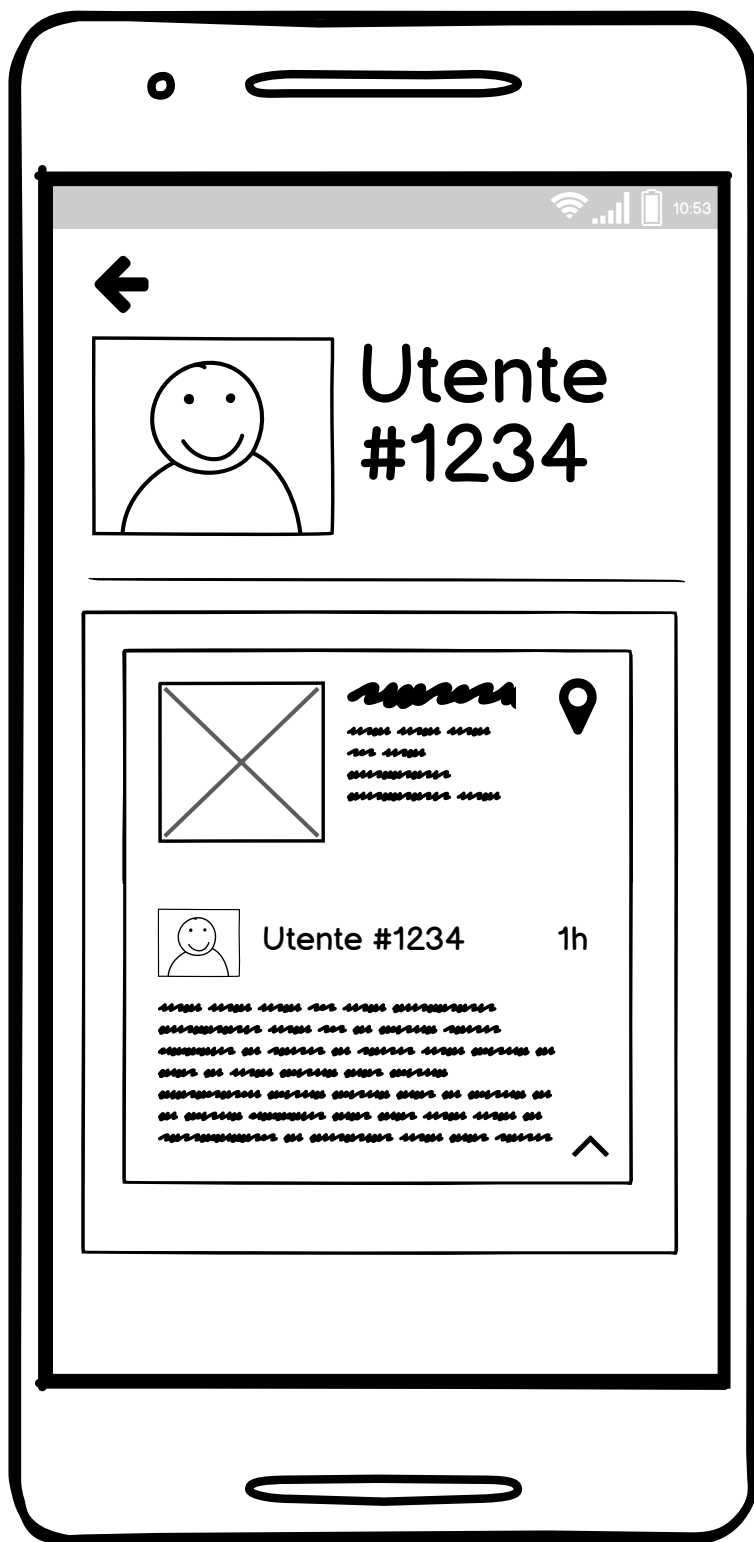

Homepage

When a user long-presses the map, a popup is shown on screen, containing a form to publish a new report.
The user chooses the title, the description, the category, checks if it requires an urgent intervention to be solved, and uploads a picture of the problem.
He can then publish or discard the report.

User page

This is the profile page of the other users of the app.
It shows their username and their profile picture,
together with a list of any report they have done.
This reports are presented in cards which can be
expanded to show more details about them.
The markers on the cards are buttons that bring you to
the exact location of the reports on the map.
The arrow in the top-left corner brings the user back to
the Explore page.

User page

This is the profile page of the other users of the app. In this view the user can see every detail about the reports, such as: title, description, category, urgency, position on the map, username, picture, status of the report (solved, still active, work in progress...) and the time passed since the report has been published.

My Profile page

This is the personal profile page of the user.
It shows their username and their profile picture,
together with a list of any report they have done.
This reports are presented in cards which can be
expanded to show more details about them.
The markers on the cards are buttons that bring you
to the exact location of the reports on the map.

My Profile page

This is the personal profile page of the user.
In this view the user can see every detail about the reports, such as: title, description, category, urgency, position on the map, username, picture, status of the report (solved, still active, work in progress...) and the time passed since the report has been published.

Explore page

This is the Explore page, where the user can scroll through every report published in the app, from the most recent to the older ones.

In the report cards the user can see every detail about them, such as: title, description, category, urgency, position on the map, username, picture, status of the report (solved, still active, work in progress...) and the time passed since the report has been published.
